

The measures that matter to **Health**

Public health investment and support measures

The Government will help pay for therapies for children with disabilities under 18, while support for mental health and other healthcare-related measures is being expanded.

The Budget also includes a new 135-bed mental health facility, a new Medical Imaging Department, the expansion of Gozo General Hospital and the continued regeneration of Karin Grech Hospital and St Luke's Hospital. These developments may be relevant to organisations operating within the wider healthcare sector.

Changes affecting third-country nationals

The Budget introduces higher permit-related fees and contributions for third-country nationals. Further details should be considered when assessing the implications of these changes.

Support for digitalisation and automation

Malta Enterprise incentives supporting digitalisation and automation have been renewed for 2027. These measures may be relevant for healthcare organisations considering investment, efficiency improvements or expansion projects.
