

ROADMAP 2024

KSeF module – package optimization

- Automating bulk sending of documents
- Generating QR codes on invoices
- Converting inbound e-documents into Transaction Records (XML to Vendor Bill linked to Purchase Order)

Balance confirmation for receivables and payables

- Introducing functionality to issue a request for payment in the debt recovery processes
- Facilitating transactions with contractors

Printout of advance invoices

- Managing the whole advance sales process in various forms existing in business practice – including adjustment of advance invoices, final invoices and corrections

Enhancement of the WMS module (Warehouse Management System)

- Preparing dedicated reports for warehouse transactions

Integration with external systems

- Expanding integration with global systems supporting online payments (automation of online data flow)

Optimization of the PLP Payments module

- Enhancements in payment mapping
- Improvement of interface for generating transfers
- Direct integration of NetSuite with banks
- Expansion of the standard NetSuite mechanism in the area of linking bank statements to the payments
- Expanding the list of available templates, while accelerating the generation of a large volume of payments

Functional package supporting large organizations (Enterprise Edition)

- Processing of large transaction volumes
- Automatic fragmentation of SAFTs and files with Transaction Details
- Additional reporting mechanisms for analytic and audit processes
- KSeF – implementing field mapping functionality. Empowering users to customize the KSeF module to their specific needs
